

2002-2005 numbers.
 Powerplants are 2005, all others are 2002. Data from NMED's October 2006 emissions inventory.

2023 approximate numbers.
 Includes Desert Rock and increase of oil and gas emissions. Approximately 50% increase in oil and gas VOCs; 73,565 tons of NOx from oil and gas compressors from BLM's 2003 RMP projections. Does not show increases in number of vehicles as the county grows.

73,565 tons of NOx predicted from oil and gas by year 2023 according to the BLM's 2003 resource management plan. This is more NOx than the two current power plants combined as of 2007.
